GLOBAL WATER ISSUES - DANISH SOLUTIONS

Leif Koch are on board in a project, which is combining the techniques of the frontrunners in the danish water business. We work to reduce the leakage loss of drinkingwater on burried water pipes.

By Ida Due Koch, Leif Koch A/S and DTU Environment, 2015.11.26

The Danish Ministry of Environment and Food have announced the projects who have received the funding from MUDP Light tower projects. "Global water issues - Danish solutions" is one of the two projects.

Several countries are investing billions to secure clean drinking water and a stable water supply. Denmark has one of the lowest leakage loss on buried drinking water pipes in the world - only 8% is lost through leakages. There is a need to show a uniform and total solution on how to reach such a low level of leakage loss. A fully integrated solution with the best Danish products, techniques and services is developed.

We are proud to be one of the companies incorporated in this solution. We are going to work closely with NIRAS, Grundfos, Schneider Electric, AVK, Kamstrup, HOFOR, Nordvand and The Technical University of Denmark. We will establish two state of
